

I claim:

1. A shower device for attaching to a shower pipe, comprising:
 - a first region;
 - a second region in communication with said first region;
 - 10 a porting region constricting the end of said second region;
 - a third region in communication with said porting region;
 - an inlet in communication with said third region;
 - a tube attached to said inlet;
 - a solution apparatus in communication with said tube; and
 - 15 a point of dispersal in communication with said third region.
2. A shower device as in claim 1, wherein said first region is cylindrical in shape.
3. A shower device as in claim 1, wherein said second region is conical in shape.
4. A shower device as in claim 1, wherein said inlet can intake solution.
5. A shower device as in claim 1, wherein said porting region increases the velocity of the
- 20 water.
6. A shower device as in claim 1, wherein said third region uses a venturi force to combine solution from said solution apparatus with water exiting from said porting region.
7. A shower device as in claim 1, wherein said solution apparatus has at least one solution
- 25 reservoir.
8. A shower device as in claim 7, wherein said at least one solution reservoir holds a

5 solution such as soap or shampoo.

9. A shower device as in claim 8, wherein said at least one solution reservoir has at least one aperture for release of said solution.

10. A shower device as in claim 9, wherein said at least one aperture is in communication with a supply hose.

10 11. A shower device as in claim 10, wherein said supply hose is attached to said tube, in communication with said inlet.
